SG1I. SG1I SUBJECT: Preparation for the SRI Remote Viewing Experiment Arrangements with NPIC and NED

While preparing for a remote viewing experiment of a Soviet nuclear facility with SRI, NPIC and NED were contacted to solicit support in evaluating the data. The following describes those contacts. of NPIC was briefed on the experiment. It was explained that I was requesting accurate coordinates of the Soviet nuclear test facility and a briefing on available photographic information. After this information was supplied, I requested aid in scoring the accuracy of any task which might come from the experiment. Since this particular responsibility he is quite target is knowledgeable and willing to do a minor amount (few days) work without any formal request but would need a formal request for support from the imagery analysis service for any more extensive work. OSI/NED were briefed on the upcoming experi-It was requested that provided we obtained sufficient confirmatory physical data about the chosen target (with the help of NPIC), we need help in determining what are the most important question we could ask our subject about the site. For purposes of discussion they were to assume access to a "janitor" who was technically unskilled but had free physical express considerable doubt this technique would be useful but promised a minimal amount of support to provide questions and evaluate maintains a healthy skepticism and is reluctant to dissipate man hours on low probability projects. I think his approach will rassure a thorough review and assessment of any data.
